Cannabinoid Analysis Report

NextGen360 Ltd. have developed a further method that analyses the full cannabinoid content of products, with the ability to look at the level of each cannabinoid present in CBD products. Similar to a terpene analysis, using the Gas Chromatography Mass Spectrometry (GC-MS) allows us to analysis the cannabinoids present, identifying the component name, CAS and concentration.

The sample would be placed straight onto the using Gas Chromatography Mass Spectrometry (GC-MS) and the cannabinoids are identified using headspace technology
